1. Mark Your Place

A good bookmark is a promise you make to your future self: this is the place that matters next. It should be deliberate, visible, and separate from the page you happened to view last.

Use a main bookmark when you decide a section deserves your attention. Return to it later without losing the natural flow of the pages you visited after it.

2. Read in Your Flow

Continuous reading makes a long document feel like one calm surface. Scroll when you want to wander. Open the table of contents when you want to make a decision.

The right controls should appear when invited and disappear when they become noise. Reading width and zoom are not decoration: they let a page meet the shape of the device in your hands.

3. Notice and Think

A note should begin where an idea interrupts you. It does not need folders, tags, feeds, or an audience. It needs a page, a thought, and a reliable place to find that thought again.

Search is useful when it remains honest. A search result should take you to the right page and leave the matching words highlighted until you decide you are done looking.

4. A Small Library

A library can be intentionally small. Show only the books you selected, tell you where you last were, and keep the manual bookmark easy to reach.

Your reading history belongs to you. A reader earns trust by saving progress quietly and by never pretending that a last viewed page is the same thing as a chosen destination.

5. A Reader That Stays Out of the Way

The best reading interface is present only at the edge of attention. It can offer a bookmark, contents, search, a note, and a view adjustment. Then it gives the page back to you.

This demo PDF is intentionally short. Try scrolling, opening the contents, searching for bookmark or focus, setting a main mark, and adding a page note. The ideas are small; the reading space is the point.
